# Evolution Part 2: Mockups

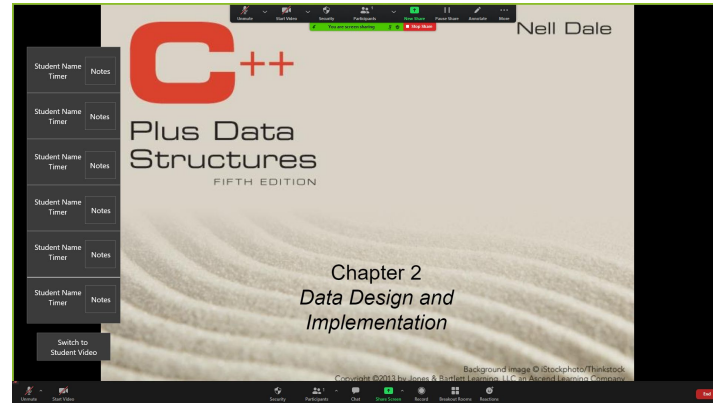

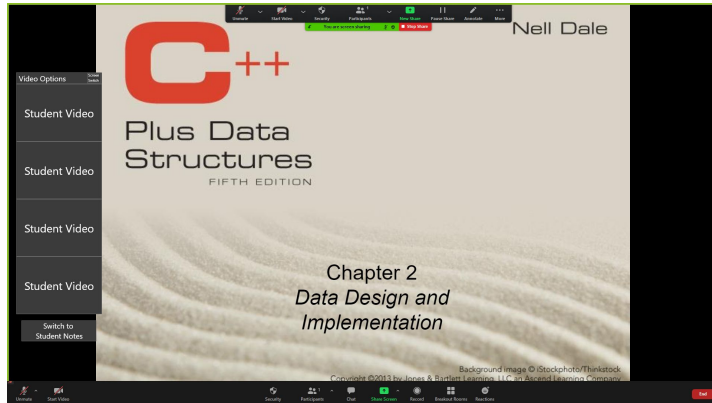

For our mockup, we decided to build off of Wireframe Version 2. This design proved to be the least intrusive, as the notepad does not cover up a significant part of the lecture screen. Our design allows students to take notes, either by text or pen input, while watching the lecture simultaneously. Constant screen-switching is not required, as the notepad is fully integrated into Zoom.

## Evolution Part 2: Mockups

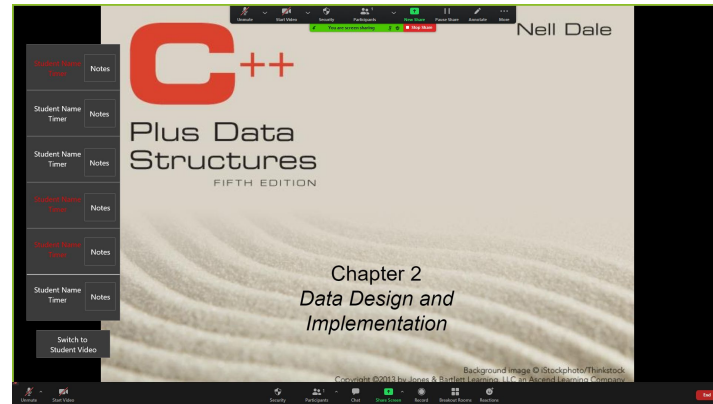

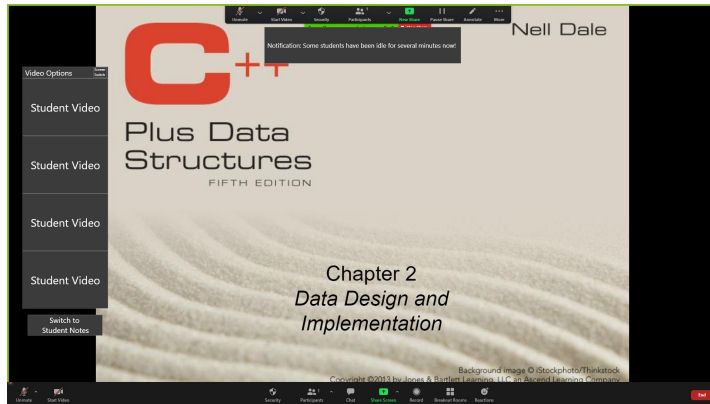

We also designed our save functionality off of Wireframe Version 3. Our design allows students to easily locate saved notes by file name and saved date, without having to leave the lecture screen at all.

## Evolution Part 2: Mockups

For the teacher mockups, we went with Version 1 of the wireframes due to the simplicity and the fact that it took up less space. We colored and formatted the menus to match Zoom's scheme. These menus are only able to be seen by the teacher.

## Evolution Part 2: Mockups

Teachers will get a notification when students have been idle for some time. We also decided to indicate using red text which students were not participating.
